

## Why on-demand?

The Software model of the kbee.docs service (known as SAAS, "Software As A Service") offers great benefits for content management as opposed to the traditional industry model, which consists in implementing servers and programs in the intranet.

### You don't need to invest in hardware or software

It is a service by subscription that includes everything, so the entrance cost is very low. You do not need to invest in hardware, base software, or application software, or backup equipment and other components necessary for your company to have a high quality service from day one.

### Fast and simple implementation

The implementation is very fast and simple. This solution would be operative in hours or days instead of months, and without putting your staff through the wear out that represents a traditional software implementation. Kbee.docs is generally ready to use in less time than what it would have taken to select and buy just the hardware equipment for the traditional model.

### High availability and reliability

Kbee.docs works over a set of servers distributed in first line Datacenters in the United States. The software is a specially designed system for large scale and high availability Internet services, where all the contents are mirrored in at least three servers. This high end solution allows offering a higher level of service with more than 99.5% uptime.

### Liberates your staff of technology

Your IT staff does not have to load with the bargain to maintain and administrate the servers, replace hard drives when they break down, add hardware, monitor the service, administrate security, perform daily backups, add security patches to the operating systems, etc.

Our service handles all of this, liberating your IT staff so that they can concentrate in innovating for you business.

### Your content is safer

Kbee.docs has a higher level of security than the traditional content Management Systems and the shared folders of the intranet. It has an advanced security framework in the heart of the application. Each user has specific permits defined by the administrator users, every communication channel from the user to the server is encrypted, and logs of all the users' activities and content changes are registered.

There are also multiple Firewall layers, along with an engineering service specialized in net monitoring, intrusion detection monitoring, and preventive maintenance of base software.

## Flexibility to grow with your company

You do not need to buy equipment or licenses in excess anticipating your growth. Your company uses the resources it needs and the service grows and reduces in an immediate and transparent way according to what it requires.

## It evolves at Internet speed

Kbee.docs has an Investigation and Development staff dedicated to innovate and improve the software. Your company receives constant evolution and improvement of the system immediately without any extra effort.
